DETAILED ACTION

Claim Rejections - 35 USC § 112

1. Claim 5 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 5, line 1, recites a "freezer", while lines 3,5,9 recite a "cooler", thus creating ambiguity.

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 2 and 5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Finkelstein et al 5,582,443 in view of Hoyt et al 4,669,282 and Hoebing 4,099,754. Finkelstein et al teach a lock assembly for refrigerator or freezer doors of typical construction having a metal outer casing with insulation in the middle, and further comprising an outer deadbolt (13) lock means 22, an inner handle means 17 and a shaft (21/17) comprised of a metal portion 21 and an insulated low thermal conductive plastic portion 17. Finkelstein et al fail to provide the lock housing mounted on the door jamb instead of the door. Hoyt et al teach a conventional deadbolt assembly with the

lock housing mounted to the door jamb 14 and the keeper on the door 10. It would have been obvious to one of ordinary skill in the art to modify the device of Finkelstein by switching the location of the housing as taught by Hoyt et al as an obvious reversal of parts. Finkelstein teaches metal mounting screws 33 countersunk in the mounting plate 28 but fails to provide a plastic cap therefor. Hoebing teaches a plastic cap 93 for a bolt. It would have been considered an obvious matter of design choice to provide the screws of Finkelstein with a plastic cap to provide further insulation from the cold.

Response to Arguments

3. Applicant's arguments filed 9/25/03 have been fully considered but they are not persuasive. Contrary to Applicant's arguments, Finkelstein does teach an outer lock actuator means 22, a bolt 13 engageable with the doorjamb keeper plate 35, and a manual inner handle 17, made from a plastic material, with an extended shaft portion 18 which meshes into engagement with the metal shaft 21, similarly to the disclosed metal shaft 32 and plastic shaft 31 shown in the instant Figure 3. Accordingly, it is maintained that Finkelstein does indeed teach the basic structural elements of the lock device. Furthermore, the teachings of Hoyt and Hoebing are considered obvious matters of design choice in modifying the location of the parts and the added plastic cap to further insulate the lock screws. Therefore, claims 2 and 5 stand rejected.

Conclusion

4. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
